

Communication Treatment: Two-Phase Protocol

Phase 1: Message Round

Watts-Strogatz network
 $k = 4, p = 0.3$

Each agent sends one
message to neighbors

then

Phase 2: Decision Round

Agent observes:

1. Own private briefing
2. Messages from neighbors

JOIN or STAY

Finding: Communication raises the mean join rate by +0.9 pp (not significant, $p = 0.243$).
The channel transmits strategic uncertainty about others' willingness to act.
